Increasingly, we make “digital” choices as part of designing our courses, conducting our scholarship and research, and interacting with colleagues. From using digital databases in research to using social media in scholarly and professional contexts, how digital technology is changing aspects of graduate education has captured attention in graduate education circles nationwide. This Assembly will provide opportunities for participants to interact with those on campus who are using digital tools and technologies to conduct research and scholarship, teach their courses, publish, and develop a digital presence in their scholarly or professional circles.

Answers to these and other questions will be demonstrated and explored in multiple formats.

All interested members of the University’s graduate and professional education community (faculty, graduate students, professional staff and postdocs) are invited to attend for all or part of the afternoon. For additional information and to register, visit http://z.umn.edu/2014gpea.
